

Transcript of video of Pat Beaulieu, R.N., discussing Silver 100

Hi, I'm Pat Beaulieu, R.N., and I'm a Registered Nurse with a lot of experience in emergency medicine, research, and intensive care unit. I had the pleasure of being introduced to ionic silver, the product was Silver 100, by a family whose mother I was caring for in the ICU unit. She had a serious problem with her bowel, lost three-fourths of her large bowel, and was basically going to die. They wanted the family to make her a "Do not resuscitate." And I encouraged the family, and the family was not ready to give up their mother.

So, they knew about Jay Newman's Ionic Silver and they introduced me to it and through many meetings with the Administrator of the hospital where I was functioning, they encouraged them to allow me to give this liquid silver and place it down her feeding tube in her stomach to see if it would have any effect on her multiple bacterial infections that she had. She had MRSA, she had VRE, she had every infectious process going on that you could imagine. We were giving her three and four different kinds of antibiotics. There was an infectious disease specialist on the case. And she just wasn't getting any better. This was recommended by her son who had taken it for pneumonia that he had and he cured himself within two days.

So I figured, "What the heck! Let's try it." So the first day I put one ounce of Silver 100 down her peg tube morning, noon, and prior to leaving my shift at 7 o'clock at night. The next day there was a dramatic result in her white count that had gone from 38,000 down to 12,000. And her x-rays from the prior day to the next day had at least 50% less "patchiness" of pneumonia in both lungs. I followed the same procedure on the second day and when I came in the next morning and looked at the chest x-ray, the patchiness was almost gone in both lungs and her white count now was down to 8,000, which is completely normal.

I was very excited and very surprised at the dramatic recovery. The family was excited and over the next week there were physicians coming to me and asking, "What's going on?" I explained the only thing that we had tried new was the Silver 100 because we all felt, her family and I, that the antibiotics weren't touching her. The purulent drainage from her tracheotomy tube was non-existent anymore; the redness around it was gone. We had sprayed Silver 100 around her trach-stoma, which is a hole in the neck where they had put in the tracheal tube to give them oxygen.

The woman went on to live, and every time she had a little "back-sliding," was given Silver and recovered within a day. I'm very pleased that I had the opportunity to meet Jay Newman and work with his product and through the next several months, I gave it to some other patients who had urinary tract infection, pneumonias, infections, open wounds that weren't healing. I had the opportunity to treat each one of them and they all recovered rather quickly. I had never seen it happen that fast! It's a wonderful product and I'm happy to be talking with you today and telling you of my experience. There were many more experiences, but I'm just happy to share those few things with you.

I had an opportunity also to give some of the Silver 100 to a personal friend of mine who was diagnosed with HIV from a needle stick. His count was 85,000 viral load of the HIV virus and he started taking this, almost a bottle a day for the first week, and then cut it down to a half a bottle the second week and then continued that for the next three weeks. And, lo and behold, his viral load dropped from 85,000 down to 6,000 and continued to drop until he became undetectable. I am very interested in the impact that this product would have on someone with HIV or Hepatitis C, or any one of those diseases that they are having such a horrible time trying to control. This product is very, very important and vital to our country! And we don't know how much further this will go, but I imagine if it continues to do the things I've seen it do, the impact on the world will be tremendous.

Based on over fifty years experience in the nursing and medical fields and watching "super germs" appear on our horizon because we're overmedicating with antibiotics because they're not working and we keep pushing new and super-speeded antibiotics that aren't working, we found a product that IS working, that is killing the bacteria and viral infections. It not only kills pneumonias, but it works on the common cold, it works on herpetic diseases, it works on flus and this is something that we ought to be using in the country, as well as out of the country so that we can stop overmedicating, over-treating and having deaths as a result of now new super-germs.
